Initiatives: Digital Workplace Infrastructure and Operations

This is a voice-over presentation outlining three key steps I&O leaders should take to ensure that their organizations can pivot to supporting long-term remote work, a key investment area for nearly three-fourths of organizations, per Gartner’s March 2020 CFO survey.

Overview

The presentation walks through three areas to focus on to improve end-user computing resiliency in the face of expanded remote work: adopting user choice, implementing modern management with UEM tooling and adopting continual improvement through continuous engineering.
